

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Experiment 1

Student Name: Piyush Kumar Varma
Branch: CSE
Semester: 5th
Subject Name: ADBMS

UID: 23BCS14116
Section/Group: KRG 3-A
Date of Performance: 24/07/2025
Subject Code: 23CSP-333

1. Aim:

University Database System helps in managing student enrollments, course allocations, and professor assignments effectively. The system also demonstrates secure access control and transaction safety. This includes CRUD operations, JOIN queries, and database-level user permission management.

- a. Author-Book Relationship Using Joins and Basic SQL Operations
- b. Department-Course Subquery and Access Control

2. Objective:

- To create and manage relational databases LibraryDB and UniversityDB using SQL.
- To define tables with appropriate primary and foreign key constraints.
- To insert sample data into author, book, department, and course tables.
- To retrieve related data using **INNER JOIN** and **subqueries** with GROUP BY and HAVING.
- To manage user access by granting **SELECT privileges** on specific tables.

3. DBMS code and output:

Solution-(a)

```
CREATE DATABASE LibraryDB;  
USE LibraryDB;
```

```
CREATE TABLE TBL_Author (  
    author_id INT PRIMARY KEY,
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
author_name VARCHAR(100),
country VARCHAR(50)
);

CREATE TABLE TBL_Book (
    book_id INT PRIMARY KEY,
    title VARCHAR(100),
    author_id INT,
    FOREIGN KEY (author_id) REFERENCES TBL_Author(author_id)
);

INSERT INTO TBL_Author (author_id, author_name, country) VALUES
(1, 'Agatha Christie', 'United Kingdom'),
(2, 'Mark Twain', 'United States'),
(3, 'Paulo Coelho', 'Brazil');

INSERT INTO TBL_Book (book_id, title, author_id) VALUES
(201, 'Murder on the Orient Express', 1),
(202, 'Adventures of Tom Sawyer', 2),
(203, 'The Alchemist', 3);

SELECT
    B.title AS Book_Title,
    A.author_name AS Author_Name,
    A.country AS Author_Country
FROM
    TBL_Book B
INNER JOIN
    TBL_Author A ON B.author_id = A.author_id;
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Book_Title	Author_Name	Author_Country
Murder on the Orient Express	Agatha Christie	United Kingdom
Adventures of Tom Sawyer	Mark Twain	United States
The Alchemist	Paulo Coelho	Brazil

Solution-(b)

```
CREATE DATABASE UniversityDB;
```

```
USE UniversityDB;
```

```
CREATE TABLE TBL_Department (  
    dept_id INT PRIMARY KEY,  
    dept_name VARCHAR(100)  
);
```

```
CREATE TABLE TBL_Course (  
    course_id INT PRIMARY KEY,  
    course_name VARCHAR(100),  
    dept_id INT,  
    FOREIGN KEY (dept_id) REFERENCES TBL_Department(dept_id)  
);
```

```
INSERT INTO TBL_Department (dept_id, dept_name) VALUES
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
(1, 'Computer Science'),  
(2, 'Mechanical Engineering'),  
(3, 'Electrical Engineering'),  
(4, 'Civil Engineering'),  
(5, 'Mathematics');
```

```
INSERT INTO TBL_Course (course_id, course_name, dept_id) VALUES  
(101, 'Data Structures', 1),  
(102, 'Operating Systems', 1),  
(103, 'DBMS', 1),  
(104, 'Thermodynamics', 2),  
(105, 'Fluid Mechanics', 2),  
(106, 'Circuit Theory', 3),  
(107, 'Power Systems', 3),  
(108, 'Structural Analysis', 4),  
(109, 'Linear Algebra', 5),  
(110, 'Calculus', 5);
```

```
CREATE USER 'piyush123'@'localhost' IDENTIFIED BY 'piyush1229';  
GRANT SELECT ON UniversityDB.TBL_Course TO 'user123'@'localhost';
```

```
SELECT dept_name  
FROM TBL_Department
```

```
WHERE dept_id IN (  
    SELECT dept_id  
    FROM TBL_Course  
    GROUP BY dept_id  
    HAVING COUNT(course_id) > 2  
);
```

dept_name
Computer Science

4. Learning Outcomes:

- Understand how to design relational databases using **primary and foreign key** constraints.
- Gain hands-on experience with **SQL DDL and DML** commands for creating and manipulating tables.
- Learn to use **INNER JOINS** to combine data from related tables.
- Apply **subqueries** with aggregation (GROUP BY, HAVING) to filter complex data sets.
- Learn how to **grant user privileges** using the GRANT statement for controlled access.
